

Gender as moderator of the interaction between the quality of the coach-athlete relationship and the prevalence of athlete burnout in sport

The purpose of this study is to understand the role that coach and athlete gender play in the interaction between an athlete's perceived quality of the relationship with the coach and athlete burnout. To date, there is a scarce availability of information in this area, which suggests that further investigation is required.

If you would like to contribute to the research, you must:

- Be 18 years or older
- Actively compete in an organised sport (club, university, semi/professional level) in England in the 2022/23 competition season

Participants are asked to take part in a 10 minute survey via Qualtrics. Access for more information on the study and the online survey can be found by scanning the QR code below or following this [link](#).

If you would like further information regarding this research, please contact Amy on amy.shanahan@northumbria.ac.uk.

This study has received ethical approval from Northumbria University's Ethical Approval Board.
